***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Takebayashi et al. (5,577,165).

As to claim 1, Takebayashi teaches a dialogue based speech recognition system comprising:

A speech understanding unit having a speech recognition dictionary for generating semantic representation, where the semantic representation are drawn from keywords extracted using a dictionary that contains the keywords having a corresponding meaning (Fig.5);

and where a single meaning (semantic content) represented in the dictionary has multiple "semantically equivalent expressions/keywords associated with it", see for example.

- 1) potato, fries;
- 2) yes, ya, that's right, that's fine;
- 3) no, that's wrong, wrong, don't want, don't need, cancel;
- 4) and, then, also, addition;
- 5) instead, rather;

According to the dictionary above, each of the five semantic contents/meanings (potato, yes, no, and, instead) have at least one or more additional word/pronunciation equally representing them (Col.10, lines 25-35).

As to claims 2-6, Takebayashi teaches where the multiple expressions are characterized according to multiple circumstances and have different pronunciations and spelling (Fig.5) and also different phrases are drawn towards a single semantic expression using syntactic and semantic analyzing unit (22) to analyze the keywords extracted according to the dictionary.

As to claims 7-10, Takebayashi teaches where the system further comprises a speech understanding unit (232) and dialogue management unit (234) and where a task specific application (ACT) is generated according to the semantic content generated by the system.

Claims 11-23 are analogous to claims 1-10 and are rejected by Takebayashi for the foregoing reasons.

#### ***Response to Arguments***

Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.
